Paper 3 Advanced Practical Skills 1

May/June 2026

2 hours

You must answer on the question paper.

You will need: The materials and apparatus listed in the confidential instructions

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen. Do **not** use correction fluid or tape.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.
- Important values, constants and standards are printed in the question paper.
- Notes for use in qualitative analysis are provided in the question paper.

Session

Laboratory

For Examiner's Use

1

3	
Total	

This document has **12** pages.

Qualitative analysis

For each test, you should record all your observations in the spaces provided.

Examples of observations include:

- colour changes seen
- the formation of any precipitate and its solubility (where appropriate) in an excess of the reagent added
- the formation of any gas and its identification (where appropriate) by a suitable test.

You should record clearly at what stage in a test an observation is made.

Where no change is observed, you should write 'no change'.

Where reagents are selected for use in a test, the name or correct formula of the element or compound must be given.

If any solution is warmed, a boiling tube must be used. If a solid is heated, a hard-glass test-tube must be used.

Rinse and reuse test-tubes and boiling tubes where possible.

No additional tests should be attempted.

1 (a) FA 1 is a solution containing one anion and one cation, both of which are listed in the Qualitative analysis notes.

- (i) Carry out the following tests and record your observations in Tables 1.1 and 1.2. For each test use a 1 cm depth of **FA 1** in a test-tube.

Table 1.1

test	observations
Test 1 Add aqueous sodium hydroxide, then	
add a few drops of acidified aqueous potassium manganate(VII) and shake the tube, then	
add a few drops of aqueous hydrogen peroxide.	
Test 2 Add aqueous ammonia.	

Table 1.2

test	observations
Test 3 Add a few drops of aqueous silver nitrate, then ----- add aqueous ammonia.	
Test 4 Add 1 cm depth of aqueous sodium carbonate, then ----- add dilute nitric acid.	

[6]

(ii) Deduce the formulae of the ions present in **FA 1**.

cation anion [1]

(iii) Write an ionic equation for **one** of the reactions in Test 4. Include state symbols.

..... [1]

(iv) Explain why the addition of aqueous ammonia in Test 3 does **not** help you to identify the anion.

..... [1]

(b) **FA 2** is a solution containing one cation and one anion, both of which are listed in the Qualitative analysis notes. The anion contains only elements in Group 16 of the Periodic Table.

- (i) Carry out tests to identify both of the ions in **FA 2**.
Record your tests and observations in a suitable form.

[5]

- (ii) Deduce the formula of **FA 2**.

FA 2 [1]

[Total: 15]

Quantitative analysis

Read through the whole method before starting any practical work. Where appropriate, prepare a table for your results in the space provided.

Show the precision of the apparatus you used in the data you record.

Show your working and appropriate significant figures in the answer to **each** step of your calculations.

2 FA 3 is a hydrated salt. **FA 3** was dissolved in water to prepare the **FA 2** used in **Question 1**.

FA 3 decomposes when heated, losing its water of crystallisation.

You will determine the formula of **FA 3** by heating it until it becomes anhydrous.

(a) Method

- Weigh the empty crucible with its lid. Record the mass in the results section.
- Add 2.10–2.40 g of **FA 3** to the crucible.
- Weigh the crucible and lid with **FA 3**. Record the mass.
- Place the crucible on the pipeclay triangle. Heat the crucible and contents **gently**, with the lid on, for approximately 2 minutes.
- Remove the lid. Heat the crucible and contents strongly for approximately 5 minutes.
- Replace the lid and leave the crucible to cool for at least 5 minutes.

While the crucible is cooling, you may wish to begin work on Question 3.

- When the crucible is cool, weigh the crucible and contents with the lid on. Record the mass.
- Place the crucible on the pipeclay triangle. Remove the lid.
- Heat the crucible and contents strongly for a further 2 minutes.
- Replace the lid and leave the crucible to cool for at least 5 minutes.
- When the crucible is cool, reweigh the crucible and contents with the lid on. Record the mass.
- Calculate the mass of **FA 3** added to the crucible, the mass of residue obtained and the mass loss. Record these masses.

Results

I	
II	
III	
IV	

[4]

(b) Calculations

- (i) Calculate the amount, in mol, of water of crystallisation lost during the decomposition of **FA 3**.

amount of H_2O lost = mol [1]

- (ii) Use the formula of **FA 2** in **1(b)(ii)** to calculate the relative formula mass, M_r , of the anhydrous salt of **FA 3**.

(If you were unable to identify **FA 2** in **1(b)(ii)**, then assume it is barium nitrate. This is **not** the correct identity.)

M_r of anhydrous salt of **FA 3** = [1]

- (iii) Use your answer to **2(b)(ii)** to calculate the amount, in mol, of the anhydrous salt of **FA 3** produced by decomposition in your experiment in **2(a)**.

amount of anhydrous salt of **FA 3** = mol [1]

- (iv) Deduce the formula of the hydrated salt, **FA 3**.
Show your working.

FA 3 [1]

- (c) (i) State the uncertainty in a single reading for the balance that you used.

uncertainty = $\pm$ g

Calculate the maximum percentage error in your measurement of the mass of **FA 3**.
Show your working.

maximum percentage error = % [1]

- (ii) A student suggests that the experiment in **2(a)** will be more accurate if the mass of **FA 3** used is doubled.

Give **one** reason why the student's suggestion is **not** correct.

.....

.....

..... [1]

[Total: 10]

- 3 You will determine the concentration of a solution of sulfuric acid by titration with aqueous potassium hydroxide.

FA 4 is dilute sulfuric acid, H_2SO_4 .

FA 5 is aqueous potassium hydroxide containing 10.0 g dm^{-3} KOH.

FA 6 is bromophenol blue indicator.

(a) Method

Preparation of **FA 7**

- Pipette 25.0 cm^3 of **FA 4** into the 250 cm^3 volumetric flask.
- Make the solution up to 250 cm^3 with distilled water.
- Thoroughly mix the contents of the volumetric flask.
- This solution of sulfuric acid is **FA 7**.

Titration

- Fill the burette with **FA 7**.
- Rinse the pipette with distilled water and then with **FA 5**.
- Pipette 25.0 cm^3 of **FA 5** into a conical flask.
- Add a few drops of **FA 6** to the solution in the conical flask.
- Perform a rough titration and record your burette readings.

rough titre = cm^3

- Carry out as many accurate titrations as you think necessary to obtain consistent results.
- Make sure any recorded results show the precision of your practical work.
- Record in a suitable form all your burette readings and the volume of **FA 7** added in each accurate titration.

Results

I	
II	
III	
IV	
V	
VI	
VII	

[7]

- (b) From your accurate titration results, calculate a suitable mean value to use in your calculations. Show clearly how you obtain the mean value.

25.0 cm³ of **FA 5** required cm³ of **FA 7**. [1]

(c) Calculations

- (i) Give your answers to **3(c)(ii)**, **3(c)(iv)** and **3(c)(v)** to an appropriate number of significant figures. [1]

- (ii) Calculate the amount, in mol, of potassium hydroxide in the volume of **FA 5** used in each titration.

amount of KOH = mol [1]

- (iii) Give the equation for the reaction taking place in the titration. Include state symbols.

..... [1]

- (iv) Calculate the concentration, in mol dm⁻³, of sulfuric acid in **FA 7**.

concentration of H₂SO₄ = mol dm⁻³ [1]

- (v) Calculate the mass, in g, of sulfuric acid in 1.00 dm³ of **FA 4**.

mass of H₂SO₄ = g [1]

- (d) A student carries out the procedure in **3(a)**. However, by mistake the student was given alkali containing 10.0 g dm⁻³ of sodium hydroxide instead of 10.0 g dm⁻³ of potassium hydroxide.

The student was **not** aware of this mistake. State and explain what effect the wrong alkali has on the concentration of **FA 7** that the student calculates in **3(c)(iv)**.

..... [2]

[Total: 15]

Qualitative analysis notes

Reactions of cations

cation	reaction with	
	NaOH(aq)	NH ₃ (aq)
aluminium, Al ³⁺ (aq)	white ppt. soluble in excess	white ppt. insoluble in excess
ammonium, NH ₄ ⁺ (aq)	no ppt. ammonia produced on warming	–
barium, Ba ²⁺ (aq)	faint white ppt. is observed unless [Ba ²⁺ (aq)] is very low	no ppt.
calcium, Ca ²⁺ (aq)	white ppt. unless [Ca ²⁺ (aq)] is very low	no ppt.
chromium(III), Cr ³⁺ (aq)	grey-green ppt. soluble in excess giving dark green solution	grey-green ppt. insoluble in excess
copper(II), Cu ²⁺ (aq)	pale blue ppt. insoluble in excess	pale blue ppt. soluble in excess giving dark blue solution
iron(II), Fe ²⁺ (aq)	green ppt. turning brown on contact with air insoluble in excess	green ppt. turning brown on contact with air insoluble in excess
iron(III), Fe ³⁺ (aq)	red-brown ppt. insoluble in excess	red-brown ppt. insoluble in excess
magnesium, Mg ²⁺ (aq)	white ppt. insoluble in excess	white ppt. insoluble in excess
manganese(II), Mn ²⁺ (aq)	off-white ppt. rapidly turning brown on contact with air insoluble in excess	off-white ppt. rapidly turning brown on contact with air insoluble in excess
zinc, Zn ²⁺ (aq)	white ppt. soluble in excess	white ppt. soluble in excess

Reactions of anions

anion	reaction
carbonate, CO ₃ ²⁻	CO ₂ liberated by dilute acids
chloride, Cl ⁻ (aq)	gives white ppt. with Ag ⁺ (aq) (soluble in NH ₃ (aq))
bromide, Br ⁻ (aq)	gives cream/off-white ppt. with Ag ⁺ (aq) (partially soluble in NH ₃ (aq))
iodide, I ⁻ (aq)	gives pale yellow ppt. with Ag ⁺ (aq) (insoluble in NH ₃ (aq))
nitrate, NO ₃ ⁻ (aq)	NH ₃ liberated on heating with OH ⁻ (aq) and Al foil
nitrite, NO ₂ ⁻ (aq)	NH ₃ liberated on heating with OH ⁻ (aq) and Al foil; decolourises acidified aqueous KMnO ₄
sulfate, SO ₄ ²⁻ (aq)	gives white ppt. with Ba ²⁺ (aq) (insoluble in excess dilute strong acids); gives white ppt. with high [Ca ²⁺ (aq)]
sulfite, SO ₃ ²⁻ (aq)	gives white ppt. with Ba ²⁺ (aq) (soluble in excess dilute strong acids); decolourises acidified aqueous KMnO ₄
thiosulfate, S ₂ O ₃ ²⁻ (aq)	gives off-white/pale yellow ppt. slowly with H ⁺

Tests for gases

gas	test and test result
ammonia, NH_3	turns damp red litmus paper blue
carbon dioxide, CO_2	gives a white ppt. with limewater
hydrogen, H_2	'pops' with a lighted splint
oxygen, O_2	relights a glowing splint

Tests for elements

element	test and test result
iodine, I_2	gives blue-black colour on addition of starch solution

Important values, constants and standards

molar gas constant	$R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$
Faraday constant	$F = 9.65 \times 10^4 \text{ C mol}^{-1}$
Avogadro constant	$L = 6.022 \times 10^{23} \text{ mol}^{-1}$
electronic charge	$e = -1.60 \times 10^{-19} \text{ C}$
molar volume of gas	$V_m = 22.4 \text{ dm}^3 \text{ mol}^{-1}$ at s.t.p. (101 kPa and 273 K) $V_m = 24.0 \text{ dm}^3 \text{ mol}^{-1}$ at room conditions
ionic product of water	$K_w = 1.00 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}$ (at 298 K (25 °C))
specific heat capacity of water	$c = 4.18 \text{ kJ kg}^{-1} \text{ K}^{-1}$ (4.18 $\text{J g}^{-1} \text{ K}^{-1}$)
